

# Theory Review (Particle Cosmology)

## Theory Review (Particle Cosmology)

- Successful junior staff hirings – very good match of phenomenological / theoretical BSM physics (Reuter/Weiler).  
A further junior appointment will strengthen the particle cosmology group.

## Theory Review (Particle Cosmology)

- Successful junior staff hirings – very good match of phenomenological / theoretical BSM physics (Reuter/Weiler).  
A further junior appointment will strengthen the particle cosmology group.
- Very lively group – new seminar initiatives that
  - a) reflect recent developments (monthly LHC physics seminar)
  - b) enhance collaboration in the HH areaContinually strong workshop activity

## Theory Review (Particle Cosmology)

- Successful junior staff hirings – very good match of phenomenological / theoretical BSM physics (Reuter/Weiler).  
A further junior appointment will strengthen the particle cosmology group.
- Very lively group – new seminar initiatives that
  - a) reflect recent developments (monthly LHC physics seminar)
  - b) enhance collaboration in the HH areaContinually strong workshop activity
- Particle Cosmology:
  - Lepto-/Baryogenesis (field theory developments)
  - Axion-like particles/hidden photons
  - Inflation
  - Dark matterDESY theory group plays an important and visible role in recent developments
